I am a Bachelor's degree graduate in Informatics Engineering with a strong interest in technology, administration, and business processes. Throughout my academic journey, I have developed a solid foundation in computer systems, networking, database management, and problem-solving, which has equipped me with the technical and analytical skills necessary for roles in IT support and system administration.

In addition to my technical background, I have a keen interest in administrative and marketing roles, driven by my ability to communicate effectively, manage documentation, and support organizational goals through structured processes and strategic planning. I am an adaptable, detail-oriented, and disciplined individual who works well both independently and as part of a team.
